Human Avian Influenza A(H5N1) Exposure Criteria

Please indicate H5N1 exposure by check marking the relevant box:

Exposure Criteria (within the 10 days prior to symptom onset):

Exposure to animals infected with H5N1 influenza virus (defined as follows):

☐ Close contact (within six feet) with infected animals; such exposures can include, but are not limited to: handling, slaughtering, defeathering, butchering, culling, caring for, or milking; OR

☐ Preparing or consuming raw animal products, or consuming uncooked or undercooked food or related uncooked food products, including unpasteurized milk, from infected animals; OR

☐ Direct contact with surfaces contaminated with feces, unpasteurized milk or other unpasteurized dairy products, or animal parts (e.g., carcasses, internal organs) from infected animals; OR

☐ Visiting a live bird market with confirmed H5N1 infections

Exposure to a person infected with H5N1 influenza virus (defined as follows):

☐ Exposure to an infected person: Close (within six feet), unprotected (without use of respiratory and eye protection) contact with a person who is a symptomatic confirmed, probable, or suspected H5N1 influenza case (e.g., in a household or healthcare facility); OR

Occupational exposure:

☐ Laboratory exposure: Unprotected exposure to H5N1 influenza virus in a laboratory.
